

90-Day AI Adoption Initiative

New Frontiers of Sound Education Team

Shared Meeting Notes Repository with AI-Assisted Agenda and Action Item Generation

Grant Batchelder

Day 90 Outcome

A smarter, more organized team by Day 90

The New Frontiers of Sound (NewFoS) Education Team will have a standardized meeting notes repository, a documented AI-assisted workflow for preparing meeting agendas and summaries, and a completed pilot demonstrating how institutionally approved AI tools can reduce repetitive administrative work while maintaining human oversight and protecting confidential information.

Problem Statement

The Challenge

Time-consuming prep

Staff spend significant time preparing weekly meeting agendas and synthesizing notes across multiple projects.

Fragmented documentation

Meeting notes are spread across individual notebooks, files, and email threads with no central repository.

The Impact

Hard to track action items

Locating previous discussions and recurring themes requires manual searching across disconnected sources.

Inconsistent & uncertain AI use

Staff lack a standardized, institutionally approved workflow for using AI with confidential documents, leading to uneven efficiency and responsible-use concerns.

Target Audience

Education Team administrators, program coordinators, Center Management, project directors, and graduate assistants

  **AI Fluency Level: 2–3** — Beginner to Intermediate

Needs

-  Centralized meeting documentation
-  A repeatable agenda preparation process
-  Reduced administrative workload
-  Clear guidance for responsible AI use
-  Human oversight throughout the workflow

Key Concerns

-  Disclosure of confidential institutional information
-  AI hallucinations or inaccurate summaries
-  Overreliance on AI
-  Additional workload during implementation

AI Tools and Approach

AI will be used to support drafting, organization, and summarization while all decisions, edits, and approvals remain the responsibility of Education Team personnel.

Tool	Purpose	Data Sensitivity	Institutionally Approved
ChatGPT through Box	Draft agendas, summarize meeting notes, identify action items	Internal / Confidential	Yes
Institutional Box	Shared repository for meeting documentation	Internal / Confidential	Yes
Microsoft Outlook	Distribute agendas and coordinate meetings	Internal	Yes

✔  **Institutional Commitment:** Only institutionally approved tools will be used, and confidential information will remain within approved university systems.

Ethical Safeguards

Risk	Safeguard	Responsible Party
AI hallucinations	Verify every draft against original meeting notes before distribution	Meeting organizer
Confidential information	Use only institutionally approved AI tools and follow university data handling requirements	All staff
Overreliance on AI	Human review and approval required for every agenda and summary	Education Team lead
Lack of transparency	Document AI assistance internally during workflow development	Meeting organizer

Population 1: Staff with Limited AI Experience

Provide a documented workflow, prompt examples, and simple templates that reduce uncertainty while allowing staff to adopt the process at their own pace.

Population 2: Collaborators from Partner Institutions

Because collaborators may operate under different institutional AI policies, the workflow focuses on governance principles rather than tool-specific requirements, allowing adaptation where appropriate.

Success Metrics

25%

Reduction in Prep Time

Agenda preparation time target by Day 90

95%

AI Accuracy Target

Measured against original meeting notes every meeting

75%

Staff Participation Goal

Eligible staff using the workflow by Day 90

Metric	How Measured	Timeline	Minimum Threshold
Repository established	Shared Box repository operational	Day 30	Repository available for team use
Agenda preparation time	Staff self-report before and after implementation	Day 90	25% reduction
Accuracy of AI-generated agendas	Comparison with meeting notes after human review	Every meeting	95% accuracy
Staff confidence	Short pre/post survey	Day 90	Average increase of one point
Workflow adoption	Percentage of eligible staff using the workflow	Day 90	75% participation

Rollout: First Three Steps

1

Step 1 — Develop

Document the current manual workflow, create a standardized meeting notes template, establish the shared Box repository, and draft the AI-assisted workflow.

Who: Grant Batchelder

Resources Needed: Existing meeting notes, Institutional Box, ChatGPT through Box

Timeline: Day 30

2

Step 2 — Pilot

Pilot the workflow during one regularly scheduled Education Team meeting and compare AI-generated agendas with the existing manual process.

Who: Grant Batchelder

Resources Needed: Meeting materials, Meeting notes, Agenda drafts

Timeline: Day 60

3

Step 3 — Refine

Collect participant feedback, revise the workflow, develop a one-page implementation guide, and prepare recommendations for future adoption.

Who: Grant Batchelder, with feedback from Sara Chavarria and the Education Team

Resources Needed: Pilot documentation, Participant feedback, Workflow guide

Timeline: Day 90

A modern office hallway with large windows on the right and glass-walled offices on the left. The ceiling has exposed ductwork and linear lighting. Two people are walking away from the camera in the distance.

50-Word Elevator Pitch

ELEVATOR PITCH

The NewFoS Education Team can improve meeting preparation by combining a shared meeting notes repository with institutionally approved AI tools that draft agendas, summarize discussions, and identify action items. Human verification remains central, allowing the team to reduce repetitive administrative work while improving organizational knowledge management through a scalable, responsible workflow.

Initiative Scope and Boundaries

This initiative focuses exclusively on recurring meetings within the NewFoS Education Team. It establishes a shared repository and standardized workflow for meeting documentation while using AI only to assist with drafting and organization. Human review remains required for every agenda, summary, and action item before distribution. Expansion beyond the initial pilot will depend on participant feedback, demonstrated value, and organizational capacity.

✓ In Scope

- Recurring NewFoS Education Team meetings
- AI-assisted agenda drafting
- AI-assisted discussion summaries
- Human review and verification
- Shared meeting notes repository

✗ Out of Scope

- AI as decision-maker
- Expansion without evaluation
- Non-recurring or ad hoc meetings
- Unverified AI-generated outputs
- Adoption beyond pilot without feedback

📌 Evidence-Grounded Design

The initiative applies principles introduced throughout the AI Campus Champions program by identifying an appropriate administrative workflow, selecting institutionally approved AI tools, requiring human verification, and limiting AI to drafting and synthesis rather than decision-making. Beginning with a small pilot aligns with responsible implementation practices and allows the workflow to be evaluated and refined before broader adoption.

Core Deliverables

By Day 90, the initiative will produce three categories of deliverables.

Repository & Templates

- Shared Box meeting notes repository
- Standardized meeting notes template

Workflows & Processes

- AI-assisted agenda generation workflow
- Meeting summary workflow
- Action item identification process

Guides & Evaluation

- Human verification checklist
- Prompt library
- One completed pilot
- One-page implementation guide
- Pilot evaluation summary
